American RENOLIT Corp. is expanding capacities

24 new jobs created

LaPorte (Indiana), June 10, 2008 – American **RENOLIT** Corporation (ARC) located in LaPorte, Indiana, USA, has put into operation a fourth calender unit and has thereby created 24 additional jobs. This investment project has required a construction period of 12 months and will start its series production in the middle of June.

Successful with quality awareness

The new calender will increase the total output of ARC by approx. 50 percent: President of ARC Arndt H. Ehrlich is very glad to see new opportunities for his location: "In the future, we are able to manufacture up to 16,000 metric tons per year." The focus will be on products for the Business Unit **RENOLIT CONTACT**, for which ARC particularly manufactures films for digital printing applications and also intends to develop new market segments. "Thanks to our high quality level we stand in the forefront of competition," says Mr. Ehrlich.

In order to retain this status quo for the future, the company has thoroughly prepared the new employees for their forthcoming mission. This important learning process lasted more than six months - a period in which the employees have also become familiar with products of the Business Units **RENOLIT DESIGN**, **RENOLIT PROFESSION** and **RENOLIT MEDICAL**. The calender unit of LaPorte is designed to also allow the manufacture of other products, if required.

Groundwork for further growth

The new calender is an independent line and is housed in a modernized complex of buildings, providing enough space for supplementary (or future) expansions at this location.
