

RENOLIT ALKORPLAN present at the World Championship in Shanghai

New competition and training pool lined with RENOLIT ALKORPLAN 2000

Barcelona, October 2011.- With an experience of over thirty five years in the waterproofing sector, and its installation of more than three hundred square metres, the **RENOLIT ALKORPLAN** swimming pool linings constitute a global benchmark for quality, innovation and technical competence. That is why the most prestigious international companies rely on **RENOLIT** products, which are present worldwide through emblematic works, prestigious events and activities related to the Olympic movement.

In this sense, **RENOLIT** was present at the 14th edition of FINA, World Championships in Shanghai, which took place in the small city from the 16th to the 31st July. The World Championship hosted the five aquatic disciplines: swimming, water polo, diving, open water and synchronized swimming, and some segments accounted for the classification of the 2012 Olympic Games.

FINA, International Swimming Federation, is the governing body of the five aquatic disciplines and advocates the following objectives: to promote and encourage the development of swimming as well as international relations; adopting the necessary rules and regulations to match all the swimming modalities; organise the World Championships and FINA competitions; and increase the number of swimming facilities worldwide.

To meet these objectives, FINA has the invaluable collaboration of **RENOLIT**, whose reinforced membranes **RENOLIT ALKORPLAN 2000** have been present in this important championship, confirming the experience and tradition of the company's quality linings in international swimming events.

RENOLIT informs:

Thus, **Myrtha Pools**, client of **RENOLIT**, was responsible for the construction of two swimming pools which included the **RENOLIT ALKORPLAN 2000** reinforced membrane for their lining. Hence, both the main swimming pool used to the swimming competition, as well as the training pool, were lined with **RENOLIT ALKORPLAN 2000** reinforced membranes, which is a sign of confidence in our products from the organisation of this prestigious championship.

The main swimming pool of the competition was installed in three weeks, providing an incredible performance. This swimming pool was built on soil, as the stadium will be used in the future for other events, with a dimension of 50 x 25 x 3 meters. It was an elevated pool, with panels and lined entirely by the **RENOLIT ALKORPLAN 2000** membranes. The training swimming pool was built the same way with the following dimensions 50 x 20 x 20 metres.

The liners have converted the **RENOLIT** Group in the indisputable leader in the waterproofing field of new constructions, as well as in the pool renovation sector, both for its market share as well as for its technology and design. The exclusive property of the reinforced membranes allows it to represent the best solution in waterproofing, and is therefore present in the best pools in the world.

About RENOLIT :

The RENOLIT Group is an international leader in the manufacture of high quality plastic films and products. This independent family-run business, which has been setting benchmarks for quality and innovation for 60 years, now employs a workforce of approximately 4000 employees at its 30 production sites and distribution facilities. The RENOLIT brand enjoys a worldwide reputation for technical expertise, modern product design and customer-orientated service.

A policy which it has applied especially in the waterproofing market of new constructions and the renovation of swimming pools, a sector, which thanks to its quality and the innovation of its membranes, have made it world leader. Thanks to the unique properties of the RENOLIT ALKORPLAN reinforced membrane, thousands of private and public swimming pools have relied on our products. From the simplest swimming pools designed to recreational use, to emblematic projects linked to the Olympic movement.
