COLOUR ROAD JOURNEY 23/24 | EXTREME GREEN

Rely on it.

EXTREME GREEN

"Extreme Green" carries the ability to rise above simply being green. This is a hue brimming with strong colour and an attitude that matches the times in which we live. Bold, energized, and strong, it is green on a new level, one that makes a statement while still celebrating its core, natural message.

Growing in use in projects large and small, biophilic design incorporates the beauty of nature and engages humanity with nature on a more intimate level. It literally becomes part of the architectural and interior design landscape, developing spaces that are not only attractive, but healthy for all.

For a design that plays to a whimsical side, combine Extreme Green with the near-black of *Haithabu Twinkle P Premier* and the bright orange of *Glow* to create an aesthetic that suggests the discovery of exotic flora under a night sky. The combination is unexpected and celebrates high contrast and bold colour, as so brilliantly exhibited in nature.

A design can exhibit a quiet mood when the energy of Extreme Green is balanced with the warm golden colours of *Comfort Oak Natural Premier* and the toned yellow of *Rich Soil*. With muted sheens and the complement of wood finishes, the combination calls to mind a stroll through a lush garden, composed of nature's most accessible colours.

Nature is definitely nurturing and comforting. It is also bold, wild and, at times, extreme. Celebrate its uninhibited side with Extreme Green!
