

RENOLIT Cramlington Ltd

Gender Pay Gap Statement

RENOLIT Cramlington Ltd is part of the **RENOLIT Group**, the leading global specialist for high-quality plastic films, sheets and other plastic products. With more than thirty production sites and sales entities in over twenty countries, and with annual sales of around €1 billion, the company is one of the world's leading plastic product manufacturers. Today more than 4,700 employees continue to further the knowledge and expertise gained from over seventy years of business.

In accordance with the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017, which came into force in April 2017, **RENOLIT** Cramlington Ltd, as an employer of more than 250 employees is required to publish its gender pay gap data.

The gender pay gap should not be confused with equal pay. Unlike equal pay data, which considers the differences between men and women carrying out similar jobs or work of equal value, the gender pay gap takes into account all jobs and is the difference between the average hourly earnings of men and women expressed as a percentage of men's earnings.

A gender pay gap may arise for various reasons, with some resulting from reasons external to the workplace. In common with many long established manufacturing businesses the workforce is predominantly male.

At the April 2019 calculation date, **RENOLIT** Cramlington Ltd employed 320 people of whom 89% were male and 11% were female.

The hourly gender pay gap contained in this report was calculated as at the 5th April 2019 and bonus data from bonuses paid in the 12 months prior to that date. Comparison of average hourly earnings for the pay period indicates that **RENOLIT** Cramlington Ltd has a mean pay gap of 6.68% and a median pay gap of 6.55%.

A gender neutral grading structure is applied to each role at **RENOLIT**. Production and engineering is predominantly male, although recruitment is always open to both male and female applicants. At the April date, **RENOLIT** Cramlington Ltd had 217 shift workers (68% of the workforce) who attracted a shift premium for various unsocial hours patterns worked, of these shift workers 99% were male. Day workers, who made up 32% of the workforce, did not receive a shift premium. 33% of day workers were female and 67% male.

When the pay gap figures are calculated excluding shift payments, the mean pay gap becomes -6.34% and the median gap -10.85%, both figures moving in favour of female employees.

The Company operates a gender neutral bonus scheme with a slightly higher percentage of female employees receiving a bonus due to the qualifying periods for new employees. While there was no difference in the median bonus payment the mean was significantly higher due to the higher number of male employees at senior level within the company at 50.60%.

I confirm that the data provided is accurate and meets the requirements of the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017.
